

Key Stage 3 Progression Mapping

Year 8 – Summer Term

Objective	Emerging	Developing	Secure	Mastered
Unit#1: Proportional Problem Solving				
DfE: RPR9: I can... “solve problems involving direct and inverse proportion, including graphical and algebraic representations”	<ul style="list-style-type: none"> recognise the difference between ratio and proportion express a proportion as a fraction or a percentage understand proportion (e.g. using rectangles & enlargement) solve problems involving simple direct proportion 	For situations that are directly proportional: <ul style="list-style-type: none"> solve problems algebraically [e.g. recipe problems] write formulae representing them draw and recognise graphs of them (e.g. currency exchange rates) 	Use graphs to solve problems involving <i>direct</i> proportion For <i>inverse</i> proportion: <ul style="list-style-type: none"> understand it (e.g. using area of rectangle) write a formula to express it use algebra to solve problems involving it (possibly use rectangle “model”) 	For an <i>inversely</i> proportional relationship: <ul style="list-style-type: none"> sketch a graph representing it recognise a graph representing it solve problems involving it <i>by</i> using a graph
Unit#2: Spatial Problem Solving				
DfE: GM13: I can... “apply angle facts, triangle congruence, similarity and properties of quadrilaterals to derive results about angles and sides, including Pythagoras’ Theorem, and use known results to obtain simple proofs”	Identify 2D shapes that are <ul style="list-style-type: none"> similar congruent (including using triangle rules) For congruent & similar triangles, find missing: <ul style="list-style-type: none"> lengths of sides angles 	Identify six basic quadrilateral types using angle, side & diagonal facts For quadrilaterals, find missing: <ul style="list-style-type: none"> angles lengths of sides For hypotenuse of a right-angled triangle, identify it	From mathematical diagrams, give geometrical proof for missing <ul style="list-style-type: none"> lengths of sides angles Recognise proofs of Pythagoras’ theorem; noting $x^2+y^2=r^2$ within a circle & algebraic links	Find missing angles and lengths of sides based upon knowledge of Pythagoras’ Theorem
DfE: GM14: I can... “use Pythagoras’ Theorem and trigonometric ratios in similar triangles to solve problems involving right-angled triangles”	For hypotenuse of a right-angled triangle, identify it (where two side-lengths are given or otherwise) State Pythagoras’ Theorem as a formula Label the sides of a right-angled triangle with trigonometric names where a non-90° angle is given	For Pythagorean Triples <ul style="list-style-type: none"> explain them use their multiples to solve problems test whether three numbers form a triple recall the first two triples In a right-angled triangle problem, calculate the missing length of <ul style="list-style-type: none"> the hypotenuse a shorter side 	Calculate length of a line segment between two coordinates Answer problems needing missing lengths: <ul style="list-style-type: none"> for an isosceles triangle, by forming two congruent right angled triangles for a right-angled triangle, by forming two smaller (mathematically similar) right-angled triangles 	Calculate the ratios for the sine, cosine and tangent functions Distinguish problems where trigonometry rather than Pythagoras’ theorem is needed and: <ul style="list-style-type: none"> Identify which trigonometric function is needed Use it to find a solution

<p>DfE: GM15: I can... “use the properties of faces, surfaces, edges and vertices of cubes, cuboids, prisms, cylinders, pyramids, cones and spheres to solve problems in 3-D”</p>	<p>Create & solve simple counting / identification problems (e.g. using faces, edges, vertices) for single solids in 3D (e.g. a regular solid has 8 vertices, how many faces does it have?) + Euler’s formula</p>	<p>Create & solve simple counting / identification problems (e.g. using faces, edges, vertices) for compound shapes in 3D (e.g. a regular solid has 8 vertices, how many faces does it have?)</p>	<p>Use knowledge of properties of individual and compound 3D solids to solve “real life” problems (e.g. pathway over / around /through solids on an obstacle course; wrapping / painting; filling)</p>	<p>Further problem solving incorporating:</p> <ul style="list-style-type: none"> • Complex pathways (e.g. diagonal around a cylinder) • Pythagoras in full 3D • More complex volumes (e.g. pyramids/cones)
<p>Unit#3: Chance</p>				
<p>DfE: P3: I can... “enumerate sets and unions/intersections of sets systematically, using tables, grids and Venn diagrams”</p>	<p>Use a Carroll diagram (two-way table) to sort data into two sets: understanding that data in both sets is counted only once</p> <p>Find the data for the intersection of two sets (e.g. by creating then solving equation)</p>	<p>Transfer data from a Carroll diagram (two-way table) into its appropriate regions on a Venn diagram</p> <p>Understand (highlight / name / quantify) initial ideas of Venn Diagrams:</p> <ul style="list-style-type: none"> • union of sets • intersection • universal set 	<p>Understand (highlight / name / quantify) further ideas of Venn Diagrams:</p> <ul style="list-style-type: none"> • complement • element • $n(A)$ for set A <p>Draw Venn diagram representing “real life” data showing:</p> <ul style="list-style-type: none"> • 2 intersecting sets • 3 intersecting sets 	<p>Understand importance of first finding the intersection when completing a Venn Diagram (e.g. using algebra to find it)</p> <p>Extract data from parts/whole of Venn diagram</p> <p>Read a problem and when possible, solve it by using a Venn diagram</p>
<p>DfE: P4: I can... “generate theoretical sample spaces for single and combined events with equally likely, mutually exclusive outcomes and use these to calculate theoretical probabilities”</p>	<p>Use the probability scale confidently</p>	<p>Create a sample space to:</p> <ul style="list-style-type: none"> • represent a situation • calculate the theoretical probability of a particular outcome 	<p>Draw & use a sample space to:</p> <ul style="list-style-type: none"> • show all possible outcomes in a given situation • calculate theoretical probability in a given situation • discuss how probability can change when more information is known about a situation 	<p>Understand how probability helps to predict trends in large numbers of events (convergence of <i>experimental probability</i> with <i>theoretical probability</i>) . Apply theoretical probability to number of experiments.</p> <p>Interpret probabilities in order to understand and make decisions around risk and uncertainty (e.g. financial maths)</p>
<p>Unit#4: Interpreting Relationships</p>				
<p>DfE: GM16: I can... “interpret mathematical relationships both algebraically and geometrically”</p>	<p>Assess algebraic relationships for truth: are identities valid?</p> <p>Distinguish expressions, equations & formulae.</p>	<p>Identify different ways (& related formulae) to calculate to/from perimeter & area of 2D shapes such as:</p> <ul style="list-style-type: none"> • quadrilaterals • regular polygons • circles • gradients 	<p>Explore and explain algebraic relationships</p> <ul style="list-style-type: none"> • within two or more proofs of Pythagoras’ Theorem • within angle rules • between angles & gradients 	<p>Select the appropriate formula to use to solve problems</p> <p>Rearrange formulae to help solve 3D problems (e.g. finding height from volume & radius of cylinder)</p>

Unit#5@ Precision & Competition

<p>DfE: RPR10: I can... “use compound units such as speed, unit pricing and density to solve problems”</p>	<p>Calculate speed from a given distance travelled and time taken</p> <p>Calculate distance travelled given an average speed and time taken</p> <p>Can calculate the time taken to complete a journey given a distance travelled and average speed</p>	<p>Calculate the density of an object given the mass and volume</p> <p>Calculate the mass of an object given the density and volume</p> <p>Calculate the volume of an object given the mass and density</p>	<p>Compare the value of two or more products using the unitary method to establish which offers the best Value for Money</p>	<p>Identify a range of different compound measures (e.g. population density) and related multiplication and division relationships</p> <p>Use compound measures to solve problems in context</p>
<p>DfE: N13: I can... “round numbers and measures to an appropriate degree of accuracy [for example, to a number of decimal places or significant figures]”</p>	<p>Round to the nearest whole unit</p> <p>Use decimal places:</p> <ul style="list-style-type: none"> ● to round a number ● to round units of measure 	<p>Use the rules for rounding to significant figures</p> <ul style="list-style-type: none"> ● to round whole numbers ● to round numbers with decimals ● to round units of measure <p>Identify the most significant figure in any number</p>	<p>Compare the results of rounding the same number to significant figures and decimal places at different stages of calculation comparing resulting approximations with the precise answer</p> <p>Recognise which type of rounding is the most appropriate to use at/in different stages/situations</p>	<p>Use significant figures to make estimations /approximations</p> <p>Round off amounts of money appropriately at different stages of calculations depending on purpose (estimation / approx. v. precision)</p> <p>Calculate costs based on amounts that have been rounded [noting lower & upper limits]</p>
<p>DfE: S3: I can... “describe simple mathematical relationships between 2 variables (bivariate data) in observational and experimental contexts and illustrate using scatter graphs”</p>	<p>Plot a neat and accurate scatter graph:</p> <ul style="list-style-type: none"> ● using a pencil and ruler ● using an appropriate title and labels to show what the scatter graph represents 	<p>Read and interpret points on a scatter graphs</p> <p>Identify, describe and interpret correlation</p> <p>Describe the relationship between two variables</p>	<p>Draw a line of best fit on a scatter graph</p> <p>Make a prediction using a line of best fit</p> <p>For outliers:</p> <ul style="list-style-type: none"> ● notice them ● identify possible causes of them 	<p>Find gradient of line of best fit</p> <p>Create equation for line of best fit</p> <p>Describe the risks of extrapolation compared to interpolation</p>
<p>DfE: N14: I can... “use approximation through rounding to estimate answers and calculate possible resulting errors expressed using inequality notation $a < x \leq b$”</p>	<p>Identify and explain inequality symbols</p> <p>Insert inequality notation into maths statements</p> <p>Convert sentences into mathematical notation using inequalities</p>	<p>Round quantities and amounts (incl. fractions) to</p> <ul style="list-style-type: none"> ● decimal places ● significant figures <p>Use rounded figures to make estimates</p>	<p>Use inequality notation to express the relative value of estimates (based on figures rounded at earlier stages) compared to precise solutions</p> <p>State lower & upper limits of accuracy</p>	<p>Make approximations using rounded figures (e.g. “answer is between 3 and 4”)</p> <p>Express possible errors of approximation using inequality notation</p>
